SEPARATELY MANAGED ACCOUNTS: COMPOSITE PERFORMANCE

As of June 30, 2022

OUR FIRM

Crossmark Global Investments is a faith-based firm that creates, manages, and distributes values-based investment strategies that equip financial intermediaries and their clients to align their wealth with their passions and convictions. For over 30 years, the firm has delivered uniquely constructed products based on its proprietary, disciplined, and repeatable process. Founded in 1987, the firm is headquartered in Houston, Texas. For more information visit: www.crossmarkglobal.com.

* Net performance was calculated using the hypothetical highest annual all-inclusive wrap fee of 3.00% by deducting .75% from the last month of each quarter. Gross performance is shown as supplemental information and is stated as pure gross of all fees as the returns have not been reduced by transaction costs. Wrap fees include Crossmark's portfolio management fee as well as all charges for trading costs, custody, and other administrative fees. Due to the effect of compounding, annual returns shown net of fees may be lower than the return that would be shown if the fee were deducted from the gross return at a single point in time.

Crossmark Global Investments, Inc. (Crossmark) is an investment adviser registered with the Securities and Exchange Commission that provides discretionary investment management services to mutual funds, institutions, and individual clients. Information and recommendations contained in market commentaries and writings are of a general nature and are not intended to be construed as investment, tax or legal advice. Investment advice can be provided only after the delivery of Crossmark's firm Brochure and Brochure Supplement Form ADV (Parts 2A and 2B) and Form CRS, and once a properly executed investment advisory agreement has been entered into by the client.

All Investments are subject to risks, including the possible loss of principal. Past performance does not guarantee future results. The Strategies may not achieve their objectives if the managers' expectations regarding particular securities or markets are not met.

Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk).

Small-cap investments may be subject to smaller companies risk. Stocks of smaller, less seasoned companies are generally subject to greater price fluctuations, less liquidity, higher transaction costs, and higher investment risk than those of larger, more seasoned issuers. Smaller companies may have limited product lines, markets, or financial resources, and they may be dependent on a limited management group or lack substantial capital reserves or an established performance record. There is generally less publicly available information about such companies than for larger, more established companies.

Investments in securities of issuers in foreign countries involves additional risks not associated with domestic investments. These risks include, but are not limited to: (1) political and financial instability; (2) currency exchange rate fluctuations; (3) greater price volatility and less liquidity in particular securities and in certain foreign markets; (4) lack of uniform accounting, auditing, and financial reporting standards; (5) less government regulation and supervision of some foreign stock exchanges, brokers and listed companies; (6) delays in transaction settlement in certain foreign markets; (7) less availability of information; and (8) imposition of foreign withholding or other taxes.

Options are not suitable for every investor. Writing call options to generate income and to potentially hedge against market declines by generating option premiums involves risk. These risks include, but are not limited to, potential losses if equity markets or an individual equity security do not move as expected, and the potential for greater losses than if these techniques had not been used. If the market price of a security increases, a call option written against that security limits the gain that can be realized. And, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives.

The Equity Market Neutral Strategy also exposes the investor to short sale risk. An investor's account would incur a loss as a result of a short sale if the price of the security sold short increases in value between the date of the short sale and the date on which the account purchases the security to replace the borrowed security. In addition, the securities sold short may have to be returned to the lender on short notice, which may result in the account having to buy the securities sold short at an unfavorable price to close out a short position. If this occurs, any anticipated gain to the account may be reduced or eliminated, or the short sale may result in a loss.

Fixed income investments generally involve three principal risks—interest rate risk, credit risk, and liquidity risk. Prices of fixed-income securities rise and fall in response to interest rate changes (interest rate risk). Generally, when interest rates rise, prices of fixed-income securities fall. The longer the duration of the security, the more sensitive the security is to this risk. There is also a risk that the issuer of a note or bond will be unable to pay agreed interest payments and may be unable to repay the principal upon maturity (credit risk). Lower-rated bonds, and bonds with longer final maturities, generally have higher credit risks. As interest rates rise and/or the credit risk associated with a particular issuer changes, bonds held within a portfolio may become difficult to liquidate without realizing a loss (liquidity risk).

Some strategies incorporate values-based screening policies which exclude certain securities issuers from the universe of otherwise available investments. As a result, the strategy may not achieve the same level of performance as it otherwise would have in the absence of the screening process. If the strategy has invested in a company that is later discovered to be in violation of one or more screening criteria and liquidation of an investment in that company is required, selling the securities at issue could result in a loss to the strategy. Further, the strategy's values-based screening policies may prevent the strategy from participating in an otherwise suitable investment opportunity. With respect to Equity Market Neutral, the values-based screening policies apply only to long positions.

Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a GIPS Composite Report by sending a request to: advisorsolutions@crossmarkglobal.com.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.
