Crossmark Global Investments, Inc. (Crossmark) is an investment adviser registered with the Securities and Exchange Commission that provides discretionary investment management services to mutual funds, institutions, and individual clients. Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a GIPS Composite Report by sending a request to: advisorsolutions@crossmarkglobal.com.

The Crossmark Balanced Core strategy invests in an allocation of 50% stocks of large cap U.S. companies, and 50% government obligations, government agency securities, and investment-grade corporate bonds, each with maturities ranging, on average, between 1 and 30 years. The Crossmark Balanced Core Wrap composite includes all fully discretionary wrap accounts that are managed using this strategy. The composite excludes accounts for which the clients have imposed restrictions or requirements that impede the manager from fully executing their strategy such that the results will not be representative of the strategy. For comparison purposes, the composite is measured against the Russell 1000 TR Index equally blended with the Bloomberg Barclays U.S. Government/Credit Bond Index. Russell 1000 Index is a market index that tracks the largest 1,000 stocks by market capitalization that are included in the Russell 3000 index. The equity portion of the Balanced Core product was originally measured against the Russell 1000 Growth Index, and in March 2020 was changed to the S&P 500 Index. Effective July 2021, it has since been determined that the Russell 1000 index is the more appropriate index for the historical life of the product. The Bloomberg Barclays U.S. Government/Credit Bond Index measures the performance of investment grade corporate debt and agency bonds that are dollar denominated and have a remaining maturity of greater than one year. The blended benchmark returns presented are calculated by linking the daily blended component returns.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.

All Investments are subject to risks, including the possible loss of principal. Past performance does not guarantee future results. The Balanced Core Strategy may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk).

Fixed income investments generally involve three principal risks—interest rate risk, credit risk, and liquidity risk. Prices of fixed-income securities rise and fall in response to interest rate changes (interest rate risk). Generally, when interest rates rise, prices of fixed-income securities fall. The longer the duration of the security, the more sensitive the security is to this risk. There is also a risk that the issuer of a note or bond will be unable to pay agreed interest payments and may be unable to repay the principal upon maturity (credit risk). Lower-rated bonds, and bonds with longer final maturities, generally have higher credit risks. As interest rates rise and/or the credit risk associated with a particular issuer changes, bonds held within a portfolio may become difficult to liquidate without realizing a loss (liquidity risk).

* Model Portfolios are based on a hypothetical account managed during the current quarter. Actual characteristics and income may differ from model.

Net performance was calculated using the hypothetical highest annual all-inclusive wrap fee of 3% applied quarterly.
