¹ Model Portfolios are based on a hypothetical account managed during the current quarter. Actual characteristics and income may differ materially from model.

² Returns greater than one year are annualized.

³ Beta is measured against the secondary benchmark, S&P 500.

The current quarter's data is preliminary. Net performance was calculated using the hypothetical highest annual all-inclusive wrap fee of 3% applied quarterly.

Strategy Objective:

The Crossmark Covered Call Income strategy seeks to generate current income with capital appreciation potential.

- Current Income
- Capital Appreciation Potential
- Diversified Equity Portfolio and
- Decreased Volatility

Model Portfolio Characteristics ¹

Number of underlying holdings:	36

Investment Process

The Strategy employs a four-step process that combines dividend income style with relative risk controlled portfolio construction and values screening policies:

Crossmark Global Investments, Inc. is an investment advisor registered with the Securities and Exchange Commission under the Investment Advisers Act of 1940. Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a compliant presentation and/or list of composite descriptions by sending a request to: advisorsolutions@crossmarkglobal.com

Crossmark Covered Call Income Wrap Composite contains fully discretionary wrap accounts that are invested in the Covered Call Income strategy. The composite excludes portfolios for which the clients have imposed restrictions or requirements that impede the manager from fully executing their strategy such that the results will not be representative of the strategy. For comparison purposes the composite is compared against the CBOE S&P 500 Buy Write Index (BXM) and the S&P 500 Index. The CBOE S&P 500 Buy Write Index is a benchmark index designed to reflect the hypothetical return on a portfolio that consists of a long position in the stocks in the S&P 500 Index and a short position in an S&P 500 call option.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.

Options are not suitable for every investor. Writing call options to generate income and to potentially hedge against market declines by generating option premiums involves risk. These risks include, but are not limited to, potential losses if equity markets or an individual equity security do not move as expected, and the potential for greater losses than if these techniques had not been used. If the market price of a security increases, a call option written against that security limits the gain that can be realized. And, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives.

Past performance is not an indicator of future results. Investments made using this strategy involve risk of loss, including the potential loss of principal. The principal risks associated with the Covered Call Income investment strategy are equity market risk and loss of market upside potential (traded for option premiums).
