¹ Model Portfolios are based on a hypothetical account managed during the current quarter. Actual characteristics and income may differ materially from model.

Investment Process

The Strategy employs a four-step process that allows us to optimize our strategy in differing environments by controlling interest rate risk, rotating out of sectors, and taking advantage of opportunistic market movements.

Crossmark Global Investments, Inc. is an investment advisor registered with the Securities and Exchange Commission under the Investment Advisers Act of 1940. Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a compliant presentation and/or list of composite descriptions by sending a request to: advisorsolutions@crossmarkglobal.com

Crossmark Income Opportunities Non-Wrap Composite contains fully discretionary Income Opportunities non-wrap accounts. The Income Opportunities product is designed to generate a high level of income by investing in investment grade bonds, non-investment grade bonds (high-yield), preferred stocks, REITs, international sovereign notes, mortgage-backed securities, and bonds from emerging market countries. The composite excludes portfolios for which the clients have imposed restrictions or requirements that impede the manager from fully executing their strategy such that the results will not be representative of the strategy. For comparison purposes the composite is measured against the Barclays Capital Government Credit Bond Index. The Barclays Capital U.S. Government/Credit Bond Index measures the performance of investments grade corporate debt and agency bonds that are dollar denominated and have a remaining maturity of greater than one year.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.

Past performance is not an indicator of future results. Investments made using this strategy involve risk of loss, including the potential loss of principal. The principal risks associated with the Income Opportunities investment strategy are credit risk (the risk that an issuer will be unable to pay the principal and interest due), interest rate risk (the risk that the value of a particular bond will fluctuate as market interest rates fluctuate), liquidity risk (the risk that the trading market for a particular bond is reduced), and duration risk (interest rate risk over time).

GIPS® is a registered trademark of CFA Institute. CFA Institute has not been involved in the preparation or review of this report/advertisement.
