Investment Process

The Strategy employs a four-step process that seeks to emphasize underlying bond characteristics and overall structure, in attempts to maximize the portfolio's current income and taxable equivalent yields.

Crossmark Global Investments, Inc. (Crossmark) is an investment adviser registered with the Securities and Exchange Commission that provides discretionary investment management services to mutual funds, institutions, and individual clients. Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a compliant presentation and/or list of composite descriptions by sending a request to: advisorsolutions@crossmarkglobal.com

The Crossmark Fixed Municipal Wrap Composite includes all fully discretionary wrap fixed municipal accounts. The composite excludes accounts for which the clients have imposed restrictions or requirements that impede the manager from fully executing their strategy such that the results will not be representative of the strategy. For comparison purposes the composite is measured against the Barclays Capital Quality Intermediate Municipal Bond TR Index, an unmanaged index that consists of investment grade intermediate term municipal bonds.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.

All Investments are subject to risks, including the possible loss of principal. Past performance does not guarantee future results. The Municipal Fixed Income strategy may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Fixed income investments generally involve three principal risks—interest rate risk, credit risk, and liquidity risk. Prices of fixed-income securities rise and fall in response to interest rate changes (interest rate risk). Generally, when interest rates rise, prices of fixed-income securities fall. The longer the duration of the security, the more sensitive the security is to this risk. There is also a risk that the issuer of a note or bond will be unable to pay agreed interest payments and may be unable to repay the principal upon maturity (credit risk). Lower-rated bonds, and bonds with longer final maturities, generally have higher credit risks. As interest rates rise and/or the credit risk associated with a particular issuer changes, bonds held within a portfolio may become difficult to liquidate without realizing a loss (liquidity risk). Many municipal bonds also include call features that allow the issuer to call the bonds—repaying the principal before maturity—usually done in the context of a refinancing transaction if/when interest rates fall. When a bond is called, the holder does not incur a loss, but cash received from the call must be re-deployed, generally in a less favorable interest rate environment (call risk).

Morningstar Rating™

★★★★	OVERALL
★★★★	3 YEAR
★★★★	5 YEAR
★★★★	10 YEAR

Overall, 3 Year, 5 Year, and 10 Year rating in the Muni National Short category as of 6/30/2020.

The Morningstar Rating™ or "star rating", is calculated for separate accounts with at least a three-year history. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
