\* This fund does not anticipate paying any short-term or long-term capital gains at this time. If circumstances change, a separate notification will be sent.

**Steward Covered Call Income Fund** may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk). Options are not suitable for every investor. Writing call options to generate income and to potentially hedge against market declines by generating option premiums involves risk. These risks include, but are not limited to, potential losses if equity markets or an individual equity security do not move as expected, and the potential for greater losses than if these techniques had not been used. If the market price of a security increases, a call option written against that security limits the gain that can be realized. And, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives.

**Steward Global Equity Income Fund** may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk). Investments in securities of issuers in foreign countries involves additional risks not associated with domestic investments. These risks include, but are not limited to: (1) political and financial instability; (2) currency exchange rate fluctuations; (3) greater price volatility and less liquidity in particular securities and in certain foreign markets; (4) lack of uniform accounting, auditing, and financial reporting standards; (5) less government regulation and supervision of some foreign stock exchanges, brokers and listed companies; (6) delays in transaction settlement in certain foreign markets; (7) less availability of information; and (8) imposition of foreign withholding or other taxes.

**Steward Large Cap Enhanced Index Fund** may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk).

**Steward International Enhanced Index Fund** may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk). Investments in securities of issuers in foreign countries involves additional risks not associated with domestic investments. These risks include, but are not limited to: (1) political and financial instability; (2) currency exchange rate fluctuations; (3) greater price volatility and less liquidity in particular securities and in certain foreign markets; (4) lack of uniform accounting, auditing, and financial reporting standards; (5) less government regulation and supervision of some foreign stock exchanges, brokers and listed companies; (6) delays in transaction settlement in certain foreign markets; (7) less availability of information; and (8) imposition of foreign withholding or other taxes.

**Steward Small-Mid Cap Enhanced Index Fund** may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk).

**Steward Select Bond Fund** may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Fixed income investments generally involve three principal risks—interest rate risk, credit risk, and liquidity risk. Prices of fixed-income securities rise and fall in response to interest rate changes (interest rate risk). Generally, when interest rates rise, prices of fixed-income securities fall. The longer the duration of the security, the more sensitive the security is to this risk. There is also a risk that the issuer of a note or bond will be unable to pay agreed interest payments and may be unable to repay the principal upon maturity (credit risk). Lower-rated bonds, and bonds with longer final maturities, generally have higher credit risks. As interest rates rise and/or the credit risk associated with a particular issuer changes, bonds held within a portfolio may become difficult to liquidate without realizing a loss (liquidity risk).

**Before investing in a mutual fund, you should read the fund's prospectus carefully and consider the fund's investment objectives, risks, charges and expenses. The prospectus contains this and other information about the fund. A copy of the Steward Funds' prospectus may be obtained free of charge by calling Crossmark Distributors at 800-262-6631. Past Performance does not guarantee future results.**
