Investment Process:

The Fund employs a four-step process that combines dividend income style with relative risk controlled portfolio construction and values screening policies:

- Determine the universe of Global dividend paying stocks, and apply values screens to the universe to eliminate those companies not meeting the screening policies from consideration.
- A quantitative screen is applied to the universe that identifies various positive attributes such as securities having higher dividend yields within their sectors, positive dividend growth and favorable relative earnings growth.
- A quantitative validation process is then applied to the remaining universe with respect to current available information focusing on trends and news that may impact the company. Any security that fails the review is removed from investment consideration.
- A relative risk controlled portfolio is constructed versus a targeted benchmark using the remaining universe of companies available for investment.

The Morningstar Rating™ for funds, or "star rating", is calculated for funds with at least a three-year history. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics.
