# of Holdings	24

Portfolio Manager

Victoria Fernandez, CFA

Strategy Objective

The Crossmark Intermediate Fixed Income Strategy seeks to provide capital preservation, current income and capital appreciation opportunities through investments in intermediate maturity, investment-grade bonds. The Strategy is an actively managed solution consisting of short-to-medium term bonds with maturities up to a maximum of ten years. The Strategy invests in investment-grade corporate, U.S. Government agency, and U.S. Treasury issues with a focus on generating consistent cash flow without excessive credit risk. In addition to managing credit risk, interest rate risk is addressed by active duration management with the ability to rotate into and out of individual bond issues within the three sectors noted.

Model Portfolio Characteristics*

Yield to Maturity	0.89%

Morningstar Ratings

Rating Date	3/31/2021
Morningstar Category	US SA Short-Term Bond
Morningstar Rating Overall	★★★
Morningstar Rating 3 Yr	★★★
Morningstar Rating 5 Yr	★★
Morningstar Rating 10 Yr	★★★

The Morningstar Rating or "star rating", is calculated for separate accounts with at least a three-year history. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

Crossmark Global Investments, Inc. (Crossmark) is an investment adviser registered with the Securities and Exchange Commission that provides discretionary investment management services to mutual funds, institutions, and individual clients. Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a GIPS Composite Report by sending a request to: advisorsolutions@crossmarkglobal.com.

The Crossmark Intermediate Fixed Income Wrap Composite includes all fully discretionary wrap Intermediate Fixed Income accounts. Intermediate Fixed Income accounts are invested in bonds of intermediate maturity to provide high income and preservation of capital. The composite excludes accounts for which the clients have imposed restrictions or requirements that impede the manager from fully executing their strategy such that the results will not be representative of the strategy. For comparison purposes the composite is measured against the Bloomberg Barclays US Intermediate Government/Credit Bond Index. Bloomberg Barclays US Intermediate Govt/Credit Bond is an unmanaged index that tracks the performance of intermediate term U.S. government and corporate bonds.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.

All Investments are subject to risks, including the possible loss of principal. Past performance does not guarantee future results. The Intermediate Fixed Income strategy may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Fixed income investments generally involve three principal risks—interest rate risk, credit risk, and liquidity risk. Prices of fixed-income securities rise and fall in response to interest rate changes (interest rate risk). Generally, when interest rates rise, prices of fixed-income securities fall. The longer the duration of the security, the more sensitive the security is to this risk. There is also a risk that the issuer of a note or bond will be unable to pay agreed interest payments and may be unable to repay the principal upon maturity (credit risk). Lower-rated bonds, and bonds with longer final maturities, generally have higher credit risks. As interest rates rise and/or the credit risk associated with a particular issuer changes, bonds held within a portfolio may become difficult to liquidate without realizing a loss (liquidity risk).
