Ratings

Rating Date	12/31/2020
Morningstar Category	US SA Large Growth
Morningstar Rating Overall	★★★
Morningstar Rating 3 Yr	★★★
Morningstar Rating 5 Yr	★★★
Morningstar Rating 10 Yr	★★★

The Morningstar Rating or "star rating", is calculated for separate accounts with at least a three-year history. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

Crossmark Global Investments, Inc. (Crossmark) is an investment adviser registered with the Securities and Exchange Commission that provides discretionary investment management services to mutual funds, institutions, and individual clients. Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a GIPS Composite Report by sending a request to: advisorsolutions@crossmarkglobal.com.

The Crossmark Large Cap Core Growth Wrap Composite includes accounts that are invested in growth and core stocks of large cap companies, most of which pay dividends. This composite includes all discretionary wrap accounts that are managed in this style. The composite excludes accounts for which the clients have imposed restrictions or requirements that impede the manager from fully executing their strategy such that the results will not be representative of the strategy. For comparison purposes the composite is measured against the S&P 500 TR Index. The S&P 500 Index is a large capitalization weighted index of 500 U.S. companies generally considered to be representative of broad stock market activity. The Large Cap Core Growth product was originally measured against the Russell 1000 Growth Index, but as of March 2020, the S&P 500 Index has been determined to be the more accurate index for the historical life of the product.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.

All Investments are subject to risks, including the possible loss of principal. Past performance does not guarantee future results. The Large Cap Core Growth strategy may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk).
