Model Portfolio Sector Allocation*

Model Portfolio Sector Exposure Relative to Benchmark*

All Investments are subject to risks, including the possible loss of principal. Past performance does not guarantee future results.

Composite illustrated is the Crossmark Large Cap Growth Composite.

* Model Portfolios are based on a hypothetical account managed during the current quarter. Actual characteristics and income may differ materially from model.

Net performance was calculated using actual management fees.

Index returns shown assume the reinvestment of all dividends and distributions.

ABOUT CROSSMARK

Crossmark Global Investments is a faith-based investment management firm that provides a full suite of investment strategies to institutional investors, financial advisors, and the clients they serve. For over 30 years, the firm has delivered uniquely constructed products based on its proprietary, disciplined, and repeatable process. Crossmark is especially known for helping its clients align their investments with their values by creating socially conscious, responsible investment strategies. Founded in 1987, the firm is headquartered in Houston, Texas.

Crossmark Global Investments, Inc. (Crossmark) is an investment adviser registered with the Securities and Exchange Commission that provides discretionary investment management services to mutual funds, institutions, and individual clients. Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a GIPS Composite Report by sending a request to: advisorsolutions@crossmarkglobal.com.

The Crossmark Large Cap Growth strategy consists of accounts that are invested in stocks of large and mega-cap growth-oriented U.S. companies using Crossmark's values-based screening, and seeks to outperform the investment benchmark over a market cycle. The Large Cap Growth Composite was created on July 1, 2021 and consists of all discretionary, fee-paying, commission-based, dual contract and/or separately managed accounts that are managed according to this strategy. The primary benchmark for this composite is the Russell 1000 Growth Index. The Russell 1000 Growth Index measures the performance of the large cap growth segment of the U.S. equity universe.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.

All Investments are subject to risks, including the possible loss of principal. Past performance does not guarantee future results. The Large Cap Growth strategy may not achieve its objective if the managers' expectations regarding particular securities or markets are not met. Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk).

The Strategy's values-based screening policies exclude certain securities issuers from the universe of otherwise available investments. As a result, the Strategy may not achieve the same level of performance as it otherwise would have in the absence of the screening process. If the Strategy has invested in a company that is later discovered to be in violation of one or more screening criteria and liquidation of an investment in that company is required, selling the securities at issue could result in a loss to the Fund. Further, the Strategy's values-based screening policies may prevent the Strategy from participating in an otherwise suitable investment opportunity.

* Model Portfolios are based on a hypothetical account managed during the current quarter. Actual characteristics and income may differ materially from model. Net performance was calculated using actual management fees.

Index returns shown assume the reinvestment of all dividends and distributions.
