Crossmark Global Investments, Inc. (Crossmark) is an investment adviser registered with the Securities and Exchange Commission that provides discretionary investment management services to mutual funds, institutions, and individual clients. Information and recommendations contained in market commentaries and writings are of a general nature and are not intended to be construed as investment, tax or legal advice. Investment advice can be provided only after the delivery of Crossmark's firm Brochure and Brochure Supplement Form ADV (Parts 2A and 2B) and Form CRS, and once a properly executed investment advisory agreement has been entered into by the client.

All Investments are subject to risks, including the possible loss of principal. Past performance does not guarantee future results. The Strategies may not achieve their objectives if the managers' expectations regarding particular securities or markets are not met.

Equity investments generally involve two principal risks—market risk and selection risk. The value of equity securities will rise and fall in response to general market and/or economic conditions (equity market risk). The value of any individual equity security will rise and fall in response to the market's perception of the issuer's revenues, earnings, balance sheet, credit worthiness, business plan, and overall perception of the viability of the issuer's business (selection risk).

Investments in securities of issuers in foreign countries involves additional risks not associated with domestic investments. These risks include, but are not limited to: (1) political and financial instability; (2) currency exchange rate fluctuations; (3) greater price volatility and less liquidity in particular securities and in certain foreign markets; (4) lack of uniform accounting, auditing, and financial reporting standards; (5) less government regulation and supervision of some foreign stock exchanges, brokers and listed companies; (6) delays in transaction settlement in certain foreign markets; (7) less availability of information; and (8) imposition of foreign withholding or other taxes.

Options are not suitable for every investor. Writing call options to generate income and to potentially hedge against market declines by generating option premiums involves risk. These risks include, but are not limited to, potential losses if equity markets or an individual equity security do not move as expected, and the potential for greater losses than if these techniques had not been used. If the market price of a security increases, a call option written against that security limits the gain that can be realized. And, there are significant differences between the securities and options markets that could result in an imperfect correlation between these markets, causing a given transaction not to achieve its objectives.

Fixed income investments generally involve three principal risks—interest rate risk, credit risk, and liquidity risk. Prices of fixed-income securities rise and fall in response to interest rate changes (interest rate risk). Generally, when interest rates rise, prices of fixed-income securities fall. The longer the duration of the security, the more sensitive the security is to this risk. There is also a risk that the issuer of a note or bond will be unable to pay agreed interest payments and may be unable to repay the principal upon maturity (credit risk). Lower-rated bonds, and bonds with longer final maturities, generally have higher credit risks. As interest rates rise and/or the credit risk associated with a particular issuer changes, bonds held within a portfolio may become difficult to liquidate without realizing a loss (liquidity risk).

Crossmark claims compliance with the Global Investment Performance Standards (GIPS®). Prospective clients can obtain a GIPS Composite Report by sending a request to: advisorsolutions@crossmarkglobal.com.

The U.S. Dollar is the currency used to express performance. The performance reflects the reinvestment of dividends and other earnings to the extent that client accounts included in the composite elected to reinvest dividends and earnings. Performance figures shown gross of fees do not reflect the payment of investment advisory fees.
